

Client Meeting - January 28th, 11:30 - 11:45 am PST

Team updates for the client:

- We are able to retrieve and update the database, and all local data is currently on Cloud Firestore. Our team would like to request a public Google account for Firebase (does not require payment). The free plan is generous and works well for testing, and this is the pricing chart when we need to scale up later on: <https://firebase.google.com/pricing/>
- There are visual displays for database delays (skeleton text, progress bars)
- We've updated the UI Mockup with the new ECO tracker score and submission layout.

Client updates and questions:

- The client had some feedback on the UI after the meeting (move home text below widgets on the home page, use a different symbol for ECO scoring, survey accessibility)
