

Client Meeting - November 3rd, 1:30 - 1:45 pm PST

- We updated the client on the ionic components that were implemented (popovers, search bar, segments, and progress indicators).
- Informed the client that we are working on completing a static app with all the pages in the UI mockup, and that each team member is responsible for each page from now on. A document of the plan for the static app was sent to the client.
- Feedback from the client on the pick up where you left off section: We could just display which article the user was reading, no need to save which spot specifically the user left off at.
- No meetings next week for reading break.
