

Client Meeting - October 20th, 1:30 - 1:45pm PST

- Updated the client on how we established a workflow on how to generate individual Ionic components. Presented a card component that we have added to the base project following this workflow, and explained how our team will proceed now that we can split up tasks and start writing code.
- Let the client know that we are still looking into solutions for hosting and fetching data from the site
- The client updated us on a new section with new pages (Surveys, Petitions, and Demonstrations under Take Action) that have been added to their current website so that we can incorporate these new changes in the app in the future.
