

Client Meeting - March 4th, 11:30 - 11:50 am PST

Team updates for the client:

- Article creation and edit both in browsing page and in article page
- Article tracking now syncs with article creation
- Eco tracker testing filtering by star or section
- Solution for displaying segments in narrow viewports: scrollable segments

Client updates and questions:

- Edit page looks good, client wants to know if you can upload images, which I informed them that we are working on that
- The scrollable segment looks good
- Eco tracker solutions: include the description for each solution found on the website (maybe display them on the cards). Also reminded us to add the corresponding eco solutions to each article as their own segment
-
